Tests showed Coliform Bacteria above the Drinking Water Standard in Camp Pendleton's South Water System

Our South Water System recently violated a drinking water standard. (The South Water System provides water to the 43 Area and all other Camp Pendleton areas south of Las Pulgas Road.) Although this is not an emergency, as our customers, you have a right to know what you should do, what happened, and what we did to correct this situation.

We routinely monitor for drinking water contaminants. We took 52 samples to test for the presence of coliform bacteria during October 2014. 5.8% of those samples showed the presence of total coliform bacteria. The standard is that no more than 5.0 percent of samples per month may do so.

What should I do?

- **You do not need to boil your water or take other corrective actions.**
- **This is not an emergency.** If it had been, you would have been notified immediately. Total coliform bacteria are generally not harmful themselves. *Coliforms are bacteria which are naturally present in the environment and are used as an indicator that other, potentially-harmful, bacteria may be present. Coliforms were found in more samples than allowed and this was a warning of potential problems.*
- Usually, coliforms are a sign that there could be a problem with the system's treatment or distribution system (pipes). Whenever we detect coliform bacteria in any sample, we do follow-up testing to see if other bacteria of greater concern, such as fecal coliform or *E. coli*, are present. **We did not find any of these bacteria in our subsequent testing.**
- People with severely compromised immune systems, infants, and some elderly may be at increased risk. These people should seek advice about drinking water from their health care providers. General guidelines on ways to lessen the risk of infection by microbes are available from U.S. EPA's Safe Drinking Water Hotline at 1(800) 426-4791.
- If you have other health issues concerning the consumption of this water, you may wish to consult your doctor.

What happened? What was done?

Upon learning of the violation staff immediately isolated and flushed the water lines in the affected areas, increased disinfectant levels, and re-sampled for total coliform and other bacteria. All repeat laboratory results were negative for total coliform and other bacteria. We will continue to monitor this situation closely and implement further action should the situation require.

For more information, please contact Allen Hollander at (760) 725-3567 or Water Resource Division, P.O. Box 555009 MCB Camp Pendleton, CA 92055.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this public notice in a public place or distributing copies by hand or mail.

Secondary Notification Requirements

Upon receipt of notification from a person operating a public water system, the following notification must be given within 10 days [Health and Safety Code Section 116450(g)]:

- **SCHOOLS:** Must notify school employees, students, and parents (if the students are minors).
- **RESIDENTIAL RENTAL PROPERTY OWNERS OR MANAGERS** (including nursing homes and care facilities): Must notify tenants.
- **BUSINESS PROPERTY OWNERS, MANAGERS, OR OPERATORS:** Must notify employees of businesses located on the property.
