

APPENDIX J

PLANT SPECIES ON CAMP PENDLETON

All species are listed by taxonomic family. The primary resources used to develop this table were the Camp Pendleton Plant Database, California Native Plant Society's Inventory of Rare and Endangered Vascular Plants of California (Skinner & Pavlik 1994), the CalFlora (2000) database, and The Jepson Manual (Hickman 1993). The latter two references were used as the main sources for scientific naming and taxonomy. Species indicated as on record in the herbarium were collected on Base and are archived at San Diego State University. Note: the following list does not include exotic ornamental plants used in landscaping, nor have all species listed been confirmed in sightings or survey reports on Base (all are within range distributions for the area).

1 Form: (N) Native, (E) Exotic, (P) Perennial, (B) Biennial, (A) Annual, ([G]) Grass, (H) Herb, (V) Vine, (F) Fern, (S) Shrub, (T) Tree, ([P]) Parasitic, ([HP]) Hemiparasitic, ([R]) Rhizomatic, ([S]) Succulent.

2 Wetland Indicator Rating: (OBL) Obligate Wetland, occur almost always (estimated >99%) under natural conditions in wetlands; (FACW) Facultative Wetland, usually occur in wetlands (estimated probability 67-99%), but occasionally found in nonwetlands; (FAC) Facultative, equally likely to occur in wetlands or nonwetlands (estimated probability 43-66%); (FACU) Facultative Upland, usually occur in nonwetlands (estimated probability 67-99%), but occasionally found in wetlands (estimated probability 1-33%); (UPL) Obligate Upland, occur in wetlands in another region, but occur almost always (estimated probability >99%) under natural conditions in nonwetlands in the region specified (California). If a species does not occur in wetlands in any region, it is not on the National List. The three facultative categories are subdivided by positive (+) and negative (-) modifiers to more specifically define the regional frequency of occurrence in wetlands; (+) indicates more frequently and (-) indicates less frequently found in wetlands. An asterisk (*) identifies tentative assignments based on limited information from which to determine the indicator status. "No indicator" (NI) is recorded for those species for which (NI) is recorded for those species for which insufficient information was available to determine an indicator status or that were not considered by the Regional Interagency Review Panel. For additional information and most current plant list see the USFWS National Wetland Inventory Center website (<http://www.nwi.fws.gov>).

3 Species Status: The following codes indicate whether a species has been included on a federal, state (California), and/or California Native Plant Society (CNPS) list as rare, candidate, etc. If a species does not appear on any of the lists, the Species Status field is left blank.

- For federal candidate and listed plants: (FE) federally listed, endangered; (FT) federally listed, threatened; (FC) federally listed, candidate; (FPE) federally proposed, endangered; (FPT) federally proposed, threatened.
- For state listed plants: (CE) state listed, endangered; (CR) state listed, rare; (CT) state listed, threatened.
- For CNPS list codes: (1A) species presumed extinct; (1B) species rare, threatened, or endangered in California and elsewhere; (2) species rare, threatened, or endangered in California but which are more common elsewhere; (3) species for which more information is needed; (4) a watch list of species of limited distribution.
- For exotic pest plant council (EPPC); (EPPC A) Most invasive Wildland pest plants; documented as aggressive invaders that displace natives and disrupt natural habitats. Includes two sub-lists: (EPPC A-1) Wide spread pests that are invasive in more than 3 Jepson regions; (EPPC A-2) Regional pests invasive in 3 or fewer Jepson regions; (EPPC B): Wildland pest plants of lesser invasiveness; invasive pest plants that spread less rapidly and cause a lesser degree of habitat disruption; may be wide-spread or regional. For additional information and most current California exotic pest plant list see the California Exotic Pest Plant Council website (<http://www.caleppc.org/info/plantlist.html>).
