

MCB Camp Pendleton Environmental Standard Operating Procedure

17 September 2018

Waste Grease

Grease derived from petroleum is an industrial lubricant used to reduce friction and wear on bearings and turbines. It is a heavy lubricant and it is managed and disposed of separately from liquid lubricants. Food derived grease is not included in this category or addressed in this Environmental Standard Operating Procedure. Waste grease is considered a hazardous waste in California and must be managed accordingly.

Management Procedure

1. All petroleum grease categories (unused, used, waste, contaminated, or unwanted) can collectively be accumulated in the same DOT approved waste container. Tubes with residual grease must be identified as "POL debris" and placed in a separate container.
2. Affix a hazardous waste label to the container upon placing the first amount of grease into it. Identify the contents on the label as "grease" and mark the satellite or accumulation start date depending on the storage location. The attached hazardous waste label can be printed out, placed in a document protector or zip lock bag with filled out portion showing, and taped to the container.
3. Waste grease may be accumulated at satellite accumulation or 60-day accumulation sites only. However, containers can only be wasted out from a 60-day accumulation site. Waste grease storage at a satellite accumulation site cannot exceed 180 days or 55 gallons.
4. Contact Environmental Security (Hazardous Waste) at 760-725-4375/9742/1963/0213 or PNDL_ENV-Hazardous-Waste@usmc.mil for any additional information or for assistance with disposing of waste grease.
