

# SAFETY GRAM

## MCI-WEST SAFETY PRESS

## Unexploded Ordnance Safety

*Remember the three R's*

Unexploded Ordnance (UXO) are munitions that have failed to detonate during live firing. They are **extremely dangerous** and could explode if tampered with. **NEVER TOUCH UXO OR SUSPECTED UXO!**

Exercise the three Rs:

- \* **RECOGNIZE**: Know that all UXO does not necessarily resemble an ammunition item such as certain cluster munitions.
- \* **RETREAT**: Do not attempt to move UXO. Note the location and move away from the device. Warn others who may be in the area of the potential danger.
- \* **REPORT**: On ranges or in a training area contact Range Control (760) 725-4277 and await response from a Range Inspector or EOD personnel. If in any other area call 911 and await PMO response.
